

BACKGROUND

The Intellectual Properties (IP) referenced at this site are exclusive developments of Rice Electronics (of Saint Louis, MO).

The Company's expertise spans several areas including;

- **Digital Signal Processing**
- **High Performance Embedded Computing**
- **Digital Electronics**
- **Systems Engineering**
- **Communications**
- **Signal Compression**

In Particular, Rice has a long history in the design and development of technology for real-time signal processing. This includes being the first company to configure a low-density FPGA device to perform real-time DFT/FFT processing.

The IP introduced at this site represents definitive advances in certain areas of high-speed computing and data compression. The IP represents a technology base to enable new devices, systems and infrastructure elements.
